

Hechizo Fe-EDDHMA

General Information

Water-soluble NK 9-16 Fertilizer, with soluble Leonardite and Iron in chelated form (Fe-EDDHMA) plus Manganese (Mn) to prevent nutrient deficiencies or multichlorose in plants. For this reason, to prevent or to correct severe deficiencies in crops, and to avoid any adverse interactions among Fe and Mn micronutrients and/or to improve organic matter contend into the soil, systematic treatments with Hechizo are recommended. In all these circumstances, Hechizo is an excellent alternative for both: organic and mineral fertilization as well as for the improvement of the rest of standard crop conditions.

Guaranteed Analysis

Composition	W / W %
Total Nitrogen (N)	9.3 %
Ureic Nitrogen	6 %
Organic Nitrogen	3.2 %
Soluble Potassium (K ₂ O)	16 %
Iron (Fe)	4.5 %
Fe-EDDHMA (ortho-ortho isomer)	3.9 %
Mn-EDTA	1 %
Organic Carbon	31 %
Organic matter	54 %

Advantages of Elixir

- Excellent iron availability and interchangeability
- Increase chlorophyll production
- Promoting the plants freshness and greenness
- Improves photosynthesis, energy transfer and storage processes in the plants

Recommendation for application:

Crops	Size	Soil incorporation	Drip irrigation	Time of application
Fruit Trees	Saplings	5-15 g (5-10 kg/ha)	5-10 g (4-8 kg/ha)	At the beginning of the vegetation to ensure a good sprouting, blossom and set of the fruit
	Medium plants	15-40 g (9-18 kg/ha)	15-30 g (7-15 kg/ha)	
	Big plants	30-80 g (12-25 kg/ha)	30-40 g (10-20 kg/ha)	
Vegetable	1-3 g/m ² (7-15 kg/ha)		0.5-1 g (5-12 kg/ha)	

Caution:

- Do not mix product with copper and heavy metal compounds
- A compatibility test should be carried out before mixing with fertilizer and pesticides
- In drip irrigation, it is recommended to break the dose in 2 applications every 10-15 days
- Use only when there is a recognized need.
